# Image Centering Examples

## Method 1: Center with `margin: auto`

Convert the `< img >` to block and give it left/right auto margins. The image will center itself within its container.

Used When:

- Quick, minimal markup
- Works in all browsers (IE9+)
- No extra containers required

## Method 2: Center with Flexbox

Wrap the image in a flex container and use `justify-content: center` to center it.

Used When:

- More versatile if you need vertical centering too
- Can center multiple items in a row
- Cleaner when you already use flex for other layout
